

COVID BOOSTER CLINICS FOR 5-11 year old

- 1) Children can receive Pfizer pediatric booster dose 5 months after completing primary series. If child had covid after completing primary series, families have the option to choose booster dose 2-3 months after symptoms fully cleared (and 5 months after completing primary series.)
- 2) If your child turned 12 after completing the primary series, please call the office to discuss options to receive booster dose.
- 3) Per CDC guidelines, children can receive their COVID vaccine booster and other immunizations without extra spacing.
- 4) *Families still must plan on waiting in the clinic for 15 minutes after receiving their vaccine. Masks are mandatory.*
- 5) Any patient with a history of allergies should bring their Epi-pen and inhaler even though no identified cases of anaphylaxis have been reported.
- 6) Please only 1 parent/guardian in the clinic at a time, multiple children are allowed 2 parents if necessary.

We are only scheduling June and July and will reevaluate need for additional clinics in August.
